

Regensdorf, 1st September 2006

Monsoon extends its offering of access products for Public Wireless LAN

The new and innovative "WorldAccess" allows wireless surfing at over 20'000 hotspots worldwide. As from 1st September 2006 Monsoon Networks AG also offers 7 day and 30 day PWLAN access on its credit card portal. The popular "FlexiPass" offering minute based usage will also be available on the credit card portal and in addition it will contain more minutes for the same money.

The „WorldAccess“ prepaid product permits PWLAN access at all hotspots of Monsoon as well as worldwide at over 20'000 hotspots of WeRoam, one of the leading provider PWLAN roaming solutions. Simply available through credit card online booking and minute based usage. Up to now international surfing on PWLAN required long term subscriber contracts. Prepaid products internet access was only possible on the hotspots of local providers. Monsoon now combines in the "WorldAccess" prepaid payment with international usage.

Many prepaid products deduct the time used non-stop from first login. The Monsoon "FlexiPass" whereas deducts the time used per minute and saves the remaining balance. As from 1st September 2006 Monsoon offers this popular product also on its credit card portal. Additionally Monsoon increases the minutes included from 50 minutes to 75 minutes for the 30-Franken-FlexiPass and from 100 minutes to 175 minutes for the 60-Franken-FlexiPass.

The access for 7 days respectively 30 days was up to now only available as scratch cards. Now these products are also available on Monsoon's credit card portal.

Details about products, prices and hotspots are available on Monsoon's homepage on www.monsoon.net.

About Monsoon Networks

The Swiss telecommunications company Monsoon Networks AG is one of the first European operators of Public Wireless Internet Access and Services. Monsoon was founded in 2000 and operates a radio network offering quick and wireless Internet access to so-called nomadic workers in our telecommunications network, which is being offered to Hotspots (airports, hotels, conference centres, etc.), providing high-speed wireless Internet access and enabling location-based services (such as information services, video-on-demand, local free phone services over IP, etc.) to business travellers.
