

Monzoon successfully launches new highspeed MINAS Access Solution on WLAN Hotspot at Airport Zurich

Monzoon Networks, one of the European pioneers in public WLAN hotspots, successfully launched on January 1st, 2013 the fastest version of their MINAS hotspot systems at Airport Zurich. At least 30'000 concurrent visitor are able to use high speed Internet at Airport Zurich simulataneously and free of charge. This adds another large hotspot to the existing Swiss wide hotspot footprint of 850 locations, exclusively being operated by Monzoon Networks. Besides free Internet access for 1 hour, international Roaming and additional services are available on a commercial basis.

Monzoon Networks, since more than 10 years a successful supplier and operator of public hotspot solutions, was awarded a contract by Flughafen Zurich AG, to implement the fastest version of their MINAS hotspot solution at Zurich Airport and to exclusively operate WLAN/WiFi hotspot services for passengers and visitors at the airport. The hotspot services include coverage of the spacious shopping mile of the airport.

The registration of users required by law is handled through SMS/text message and self service stations at the information counters of the airport.

The installed platform offers high speed Internet access for at least 30'000 concurrent users and connects the airport WLAN/WiFi systems with an aggregated speed of 2 * 1000 megabit per second to the Internet. Monzoon MINAS hotspot systems are managing high speed Internet access based on predefined service rules controlling user access speed, duration of usage allowed, volume of data traffic, grouping of locations, etc. .

At Zurich Airport 1 hour of free Internet access for all passengers and visitors is available every 6 hours. Thus free Internet access is available for all passengers departing and returning on the same day allowing them to check emails or enjoy Internet TV services on their tablet or smartphone.

Zurich Airport adds another large hotspot to the existing Swiss wide hotspot footprint of 850 locations, exclusively being operated by Monzoon Networks. Besides free Internet access for 1 hour, international Roaming and additional services are available on a commercial basis.

About Monzoon Networks

The Swiss telecommunications company Monzoon Networks AG is one of the first European operators of Public Wireless Internet Access and Services. Monzoon operates a radio network offering quick and wireless Internet, which is being offered to Hotspots such as airports, hotels, conference centres and various city centres across Switzerland.

Monzoon is providing Public Wireless LAN Access on a neutral platform. As a user you have the possibility to choose from one of our many partners. You can decide yourself whether to use the subscription of your home provider or rather purchase a WLAN access for a short time period directly in the hotspot.

Monzoon has substantial experience with public wireless networks and the operation of carrier grade backend systems. In addition Monzoon offers various value added services such as outsourcing, VPN, housing, wireless Internet access and much more. We engineer modular and custom solutions for you!
