Surf 13 Swiss Cities with the wireless Monsoon Hotzones

Monsoon Networks AG has complemented their already extensive Swiss WiFi coverage at over 500 hotels, McDonald's restaurants, highway rest-stops, convention centers and airports in Switzerland with an extensive outdoor WiFi "Monsoon Hotzone" area in 13 Swiss cities.

Monsoon's roaming partners and customers can enjoy high speed surfing with Smartphones, Laptops, and other WiFi enabled devices within "Monsoon Hotzone" areas in Sargans, St. Gallen, Wil, Schaffhausen, Uster, Winterthur, Zürich, Spreitenbach, Basel, Bern, Interlaken, Montreux and Geneva. Especially in Zurich a widespread coverage area around Limmatquai, Niederdorf, Bellevue and Bahnhofstrasse is available. Monsoon will continually enlarge its Hotzones throughout Y2008 and Y2009. Coverage availability can be found at: <http://home.monsoon.net>

Free IPv6 Internet Access in Monsoon Hotspots

To be honest - the following is basically interesting for technically interested readers ...

The future of the Internet is strongly depending on Version 6 of the Internet Protocol (IPv6). After years of worldwide development this future is now becoming reality in Monsoons own wireless Hotspots throughout Switzerland as one of the worldwide first Public Hotspot Services.

To celebrate IPv6 capability Monsoon provides until end of year 2008 free access to all IPv6 websites worldwide. This works if visitors notebook/PDA is IPv6 compliant - visitors shouldn't be disappointed, now at the beginning there are only few but their number will grow rapidly over time. On the portal of our partner www.sixy.ch visitors can find a list of sites available.

About Monsoon Networks

The Swiss telecommunications company Monsoon Networks AG is one of the first European operators of Public Wireless Internet Access and Services. Monsoon was founded in 2000 and operates a radio network offering quick and wireless Internet access to so-called nomadic workers in our telecommunications network, which is being offered to Hotspots (airports, hotels, conference centres, etc.), providing high-speed wireless Internet access and enabling location-based services (such as information services, video-on-demand, local free phone services over IP, etc.) to business travellers.
