

Monsoon Networks expands service portfolio significantly

Wireless Broadband – although rapid, wireless Internet is currently the topic on everyone’s lips, a great deal of expertise is required in order to offer service providers, city networks, companies and hotels Internet access that is ideally tailored to their respective requirements. Monsoon Networks is now significantly expanding its service portfolio and, in addition to WiFi® Hotspots in Switzerland, the company will in future offer systems solutions and services to Internet providers and the business community.

On its new homepage www.monsoon-solutions.net, Monsoon has put together a wide range of new solutions for Internet Service Providers, companies and business travelers:

- SwissVPN – safe surfing in the hotel and at the airport (see also: www.swissvpn.net)
- ML Travel Tool – automatic access to WiFi® Hotspots and much more
- Monsoon Virtual Public IP Service – redundant Internet access, using static IP addresses where necessary. IP addresses remain unchanged, even if a company moves.
- RASPPPoE – one of the most successful PPPoE drivers in years, an absolute must for ADSL service providers throughout the PPP world (see also: www.raspppoe.com)
- MINAS Access Gateways from Monsoon control the use of broadband Internet access in public Hotspot networks, in hotels and airports.
- Monsoon Roaming – users can select from a range of roaming partners at Monsoon Hotspots.
- Web Content Filtering – a hosted filter solution in a secure data center. The solution enables schools, restaurants and local authorities, for instance, to protect young Internet users against harmful web content.
- Consulting – Monsoon has many years of experience operating wireless access networks and back-end systems. Benefit from it!

Further details about the new services of Monsoon Networks AG are available directly from www.monsoon-solutions.net or on the company’s homepage www.monsoon.net.

Monsoon in brief

Monsoon Networks AG, a Zurich-based Swiss telecommunications company, is a pioneer in the operation of an open WLAN platform for Public Wireless Internet Access & Services. Monsoon operates a radio network offering quick, wireless Internet access at so-called Hotspots (airports, hotels, conference centers etc.), providing a platform for location based services. Monsoon provides consulting and systems solutions from a single source in the areas of nomadic broadband access and AAA back-end solutions for Internet service providers and businesses.
